PROFESSIONAL EXPERIENCE

Senior Backend Developer — Kyan Alam (SaaS/EdTech Platform Company)

August 2025 – Present

- Leading backend development for SaaS-based multi-tenant solutions and integrated platforms used across education and enterprise environments.
- Architected and built scalable, secure APIs and platform services powering cloud-hosted solutions like LMS (Learning Management System), TMS (Training Management), DMS (Diploma Management), and STS (Startup & Business Systems).
- Implemented subscription-based services, role-based access, and secure payment integrations suited for recurring SaaS usage and multiple client segments.
- Optimized performance and reliability using advanced caching, database tuning, background job processing, and cloud best practices.
- Mentored and guided backend teams, enforced coding standards, and ensured high quality, maintainable code aligned with long-term product strategies.
- Collaborated closely with product and DevOps teams to deliver robust, scalable, and resilient SaaS offerings.

JEC Company (Joint Executive Company)

Team Lead Backend Developer

February 2025-Present

- Led backend team building multi-business apps and SaaS platforms with scalable architecture.
- Directed development of E-Commerce, Car Rental, Real Estate, Event Management, and Healthcare systems with secure payment integrations.
- Drove optimization projects (caching, queries, queues, CDN, cloud) to boost performance and cut costs.
- Mentored developers, enforced coding standards, and aligned solutions with business goals.

MSARWEB Company

Mid Level Backend Developer

OCTOBER 2024 - January 2025

- Developed **multi-business mobile apps** and **SaaS platforms** with multi-tenancy and subscription billing.
- Built **E-Commerce, Marketplace, Car Rental, Real Estate, Event Management, and Dentist systems** with secure payment integrations.
- Led **optimization projects** (caching, query tuning, queues, CDN, cloud storage) reducing response times and improving scalability.

EGYTEL Company

Mid Level Backend Developer

MARCH 2024 - August 2024

- Food Delivery Platform: Scaled order & delivery system with real-time tracking, handling 50k+ daily orders.
- Healthcare System: Built patient records, scheduling, billing, and notifications with role-based access.
- Multi-Vendor Marketplace: Developed scalable APIs, optimized DB & caching → 40% faster responses.
- Chat & Notifications: Implemented real-time messaging & push services (Firebase + Redis) for millions of users.
- Optimization: Refactored queries, added caching, queues, CDN → boosted performance & reduced costs

FREELANCE

Junior Backend Developer

2023-2024

- Car Rental System: Booking, fleet tracking, pricing, and customer profiles.
- E-Commerce Platforms: Catalogs, carts, orders, and secure payment integrations.
- Event Management: Registration, ticketing, scheduling, and real-time notifications.
- Real Estate System: Property listings, advanced search, booking, and agent-client tools.
- Payments & APIs: Integrated multiple gateways, built scalable APIs & databases for high performance.

MSAR WEB Company

Junior Backend Developer

2022-2023

- E-Commerce: Built and maintained platforms (catalogs, carts, orders, payments) with scalability and security.
- LMS: Customized modules (enrollment, tracking, content) to improve usability and learning experience.
- APIs: Designed and optimized RESTful APIs for mobile/web apps with seamless third-party integrations.
- Performance: Reduced page load times by 30% through feature optimization and bug fixing.
- Databases: Assisted in MySQL/PostgreSQL design and tuning to support high transaction volumes.

EDUCATION

BACHELOR OF COMPUTER SCIENCE

[Graduated] 2025

Faculty of Electronic Engineering

Menoufia University

INTERNSHIPS

- National Telecommunication Institute (NTI)
- EraaSoft Academy Backend Development using PHP-Laravel
- Training in Msar Company For Technology

Karwa — Operations, Rental & Fleet Management Platform (Realtime + ERP)

A scalable **web & mobile platform** for managing **internal & external operations**, **vehicle rentals**, and **enterprise back-office systems**, with **live GPS tracking for all drivers** and full financial, HR, and audit control.

Key Modules & Features

1) Operations Management (Internal & External)

- Create and manage **internal and external operations** linked to branches, projects, and contracts.
- Full operation lifecycle: **Request → Approval → Resource Allocation → Execution → Closure & Reporting**.
- Operation status tracking: *Pending / Started / In Progress / Completed / Cancelled*.

2) Realtime & Live Location Tracking (All Drivers)

- **Live GPS tracking for all drivers and vehicles** on an interactive map.
- Real-time driver status: *Available / On Trip / Delayed / Offline*.
- Route tracking with **trip history, playback, and distance calculation**.
- Supports GPS devices **or** mobile-based tracking (driver app).

3) Rental Management

- Vehicle rental bookings: **daily / weekly / monthly**.
- Flexible pricing: packages, discounts, extra mileage, insurance, penalties.
- Rental contracts management with automated invoicing.
- Auto reminders for return dates, renewals, and overdue rentals.

4) Accounting & Finance System

- Chart of accounts with cost centers.
- Sales & purchase invoices.
- Receipts, payments, and journal entries.
- Financial reports: **Profit & Loss, Trial Balance, Cash Flow**.
- Operational cost vs revenue analysis per project or vehicle.

5) HR Management System

- Employee profiles, contracts, and documents.
- Attendance, shifts, leaves, and overtime.
- Payroll with allowances, deductions, and advances.
- Performance evaluations and disciplinary records.

6) Roles & Permissions (RBAC)

- Role-based access control by **module, screen, and action**.
- Permissions by branch, project, or department.
- Secure admin and supervisor access levels.

7) Activity Log & Audit Trail

- Full **activity logging** for all users and system actions.
- Tracks: login, create, update, delete, approvals, exports.
- Shows **who did what, when, and from where**.
- Security alerts for suspicious activities.

8) Dashboards & Reporting

- Real-time dashboards for operations, rentals, drivers, and revenue.
- Fleet utilization and driver performance analytics.
- Rental occupancy and profitability reports.
- Custom exportable reports (PDF / Excel).

Premium ADV — Printing, Branding & Marketing E-commerce Platform (KSA)

A bilingual (AR/EN) online store offering professional print products + advertising/marketing services with fast ordering and customer support.

Key Features:

- **Catalog & Categories:** Printing products + services across multiple categories (e.g., company prints, restaurants, contracting, digital marketing, programming).
- **Offers & Promotions:** Discounted products / “best deal today” style promotions surfaced on the homepage.
- **User Accounts:** Register/login, profile, wishlist, and order tracking.
- **Support & Help Center:** FAQ + support tickets and help/support entry points.
- **Content:** Blog section for updates/articles.
- **Store Policies & Compliance:** Terms, privacy policy (mentions Saudi PDPL practices), returns/exchange/cancellation policy pages.
- **Contact & Location:** Phone/email + Riyadh address listed.

<https://premiumadv.com>

Mobile App :

https://play.google.com/store/apps/details?id=com.thotix.kk.premium&pcampaignid=web_share

True Balance - Healthcare & Medical Consultation Platform

A scalable web & mobile platform connecting patients with doctors & therapists.

Key Features:

- **User Management:** Patients, Doctors, Therapists, Admins with secure JWT + OTP login.
- **Consultations:** Appointment booking, session tracking, ratings, full consultation lifecycle.
- **Treatment Plans:** Personalized plans, multi-treatment support, progress monitoring.
- **Payments:** Service booking, MyFatoorah gateway, subscriptions & discounts.
- **Content & Communication:** Blog, videos, notifications, reviews, support tickets.
- **Admin Tools:** Role-based access, dashboard, analytics & reporting.
- **Tech Stack:** Laravel 10, API-first, modular, multi-language (EN/AR), MySQL.

Website Link : <https://truebalance.tanfeethi.tanfeethi.com.sa>

Mobile App : Under Developement

MNT (Modern Network Technologies) — Smart Security, Networking & Low-Current Solutions (Saudi Arabia)

A corporate website presenting integrated technology solutions and vendor-backed products, with project inquiry flow.

Key Features:

- **Solutions Portfolio:** Sound systems, structured cabling/networking, IP telephony, TV systems, fire alarm, access control, smart systems.
- **Positioning & Value Props:** “Authorized partnerships”, “comprehensive solutions”, competitive pricing messaging.
- **Company Profile:** Vision/mission/values and sector coverage (government, commercial, industrial, residential & hospitality).
- **Products & Vendors:** Dedicated section highlighting vendors/products.
- **Lead Capture:** “Get started / request consultation” style CTAs + contact details (Riyadh office, phone, email).
- **Admin Tools:** Role-based access, dashboard, analytics & reporting.
- **Bilingual Presence:** Arabic pages available alongside English.

Website Link :

<https://mnt.com.sa>

Mobile App :

https://play.google.com/store/apps/details?id=com.thotix.kk.mnt&pcampaignid=web_share

Ma3refa – Educational Platform (Laravel, PHP, Blade, JS, CSS)

Developed a modular, scalable platform connecting students with providers through courses, lessons, and consultations.

Highlights:

- **Architecture:** Laravel 9, PHP 8, modular design (30+ modules), Sanctum-secured APIs, Blade-based responsive UI.
- **User Roles:** Admin, Provider, Client with Laratrust role-based access.
- **Educational Features:** Course & lesson management, virtual consultations (Agora), ratings, bookmarks, and resource categorization.
- **Payments & Business:** HyperPay integration, digital wallet, referral/commission system, dynamic pricing with tax & provider fees.
- **Support Tools:** Real-time notifications, support tickets, analytics, multi-language support, advanced search/filtering.
- **Technical Excellence:** API documentation, PHPUnit tests, code quality tools (PHP CS Fixer, PHPStan, PHPInsights).

A complete educational marketplace offering multiple learning formats across specializations and stages.

K9flow Dogs Backend – Dog Training & Management Platform (Laravel, PHP, MySQL)

Developed a modular and scalable backend for managing dog training services, connecting pet owners with professional trainers.

Highlights:

- **Architecture:** Laravel, PHP, MySQL with modular design and secure RESTful APIs.
- **User & Dog Management:** Detailed dog profiles (breed, age, health, behavior), multi-role access with JWT authentication + OTP.
- **Bookings & Payments:** Training session scheduling, package management, MyFatoorah integration with payment tracking.
- **Content & Communication:** Multilingual CMS, notifications, reviews/feedback, FAQs, newsletters, slider system.
- **Admin Tools:** Dashboard for managing users, dogs, staff, bookings, payments, and support inquiries.
- **Scalability & Security:** Role-based permissions, data integrity, and future-ready modular architecture.

A complete backend powering a dog training and management platform with strong focus on security, usability, and growth.

Dashboard Link :- <https://k9dashboard.tanfeethi.tanfeethi.com.sa/>

JEC ERP Backend – Enterprise Resource Planning System (Laravel, PHP, MySQL)

Developed a modular and scalable ERP backend to manage operations, projects, employees, and clients with automation and efficiency.

Highlights:

- **Architecture:** Laravel 10, PHP 8.1+, MySQL, modular design, RESTful APIs with JWT, multi-tenant structure for branches & departments.
- **User & Role Management:** Multi-role system (admin, employee, client) with Spatie permissions, detailed employee & client profiles.
- **Project Management:** Full project lifecycle, task tracking, deadlines, file/document handling, quotes & invoices.
- **HR & Team Management:** Employee scheduling, leave requests, shifts, rewards, department & team structures.
- **Client & Communication:** Client/project history, inquiries, notifications, reviews, newsletter system.
- **Content Management:** Static pages, FAQs, multilingual (EN/AR), promotional sliders.
- **Finance Tools:** Invoice & quote management, payment tracking, financial reporting.
- **Admin Tools:** Dashboards, reports, archives, system configuration.
- **Security & Scalability:** Role-based permissions, soft deletes, media library, event-driven extensibility, standardized API responses.

A complete ERP backend focused on **project management, HR, finance, and business automation**, designed for **scalability and future expansion**.

Dashboard Link :- <https://erpdashboard.tanfeethi.tanfeethi.com.sa>

Saudi Boutique – Ecommerce Platform (Laravel, PHP, MySQL)

This is a comprehensive ecommerce backend system built with Laravel 10 and PHP 8.1+, featuring a modular architecture with 30+ independent modules:

- **Modular Architecture:** Uses nwidart/laravel-modules for clean code organization and separation of concerns
- **Product Management:** Complete product catalog with multilingual support, SKUs, attributes, categories, and brands
- **User Management:** JWT authentication with OTP verification, user profiles, and role-based access control
- **Shopping Experience:** Cart management, favorites, product reviews, and ratings
- **Order Processing:** Comprehensive order management with payment tracking and shipping information
- **Promotions:** Coupon management system with discount calculation
- **Localization:** Multi-language support (Arabic/English) and multi-currency capabilities (SAR default)
- **Admin Dashboard:** Backend administration for managing products, orders, users, and settings
- **API Architecture:** RESTful API design with standardized response formatting

The system implements modern development patterns including service-oriented architecture, repository pattern, and comprehensive validation, making it a scalable and maintainable solution for online retail in the Saudi market.

Event Management System – Event Planning & Coordination Platform (Laravel, PHP, Blade, CSS, JavaScript)

Developed a comprehensive event management platform for planning, organizing, and coordinating events with the following features:

- Architected a secure and scalable backend using Laravel and PHP, following best practices for modular and maintainable code.
- Designed a responsive and user-friendly interface using Blade templates, CSS, and JavaScript, ensuring optimal usability across devices.
- Implemented robust event creation, editing, and scheduling functionalities, allowing organizers to manage event details, venues, and participant lists.
- Enabled user registration, authentication, and profile management for attendees, organizers, and admins.
- Developed dynamic dashboards for real-time event tracking, attendance management, and reporting.
- Integrated notification systems for event reminders, updates, and announcements.
- Supported multi-role access control, providing tailored experiences for different user types (admin, organizer, attendee).
- Ensured data validation, secure transactions, and privacy compliance throughout the application.
- Built the system with future scalability in mind, allowing for additional features such as payment integration, analytics, and third-party API connections.

Technologies:

Laravel, PHP, Blade, HTML5, CSS3, JavaScript, MySQL, Filament

Elfahd Stock Market – Inventory and Stock Management Platform (Laravel, PHP, Blade)

Developed a robust inventory and stock management platform designed for business operations and warehouse management:

- Architected a secure and scalable backend using Laravel and PHP, following best practices for modular and maintainable code.
- Built comprehensive inventory management with real-time stock tracking, product categorization, and movement logs.
- Implemented supplier and customer management modules, supporting purchasing, sales, and transaction histories.
- Developed a responsive user interface using Blade templates for easy access to dashboards, reports, and stock overviews.
- Enabled detailed analytics and reporting on stock levels, sales, purchases, and warehouse operations.
- Integrated user authentication and authorization, providing role-based access control for admins, managers, and staff.
- Automated notifications and alerts for low-stock, overstock, and key inventory events.
- Supported data import/export (CSV/Excel) for bulk management and reporting.
- Ensured data consistency, integrity, and security throughout the application.
- Designed the system for future extensibility, supporting additional modules such as barcode scanning, API integration, and advanced analytics.

Technologies:

Laravel, PHP, Blade, HTML5, CSS3, JavaScript, MySQL, Filament

Yalla Namshe – Social Networking & Event Platform

Developed an interactive social networking and event coordination platform with the following features:

- Designed a modern and responsive user interface using JavaScript, CSS, and SCSS to deliver a seamless user experience across devices.
- Built dynamic client-side components for real-time user interaction, activity feeds, notifications, and messaging.
- Implemented robust event management, allowing users to create, join, and manage social events or group activities.
- Integrated user authentication and profile management using PHP and Blade, supporting registration, login, and profile customization.
- Developed an admin dashboard for managing users, events, content moderation, and platform analytics.
- Enabled social features such as user connections, friend requests, comments, and likes to foster engagement.
- Ensured mobile compatibility and accessibility through responsive design and front-end best practices.
- Collaborated on backend API development to support real-time data updates, notifications, and event workflows.
- Maintained code quality and modular architecture for scalability and future enhancements.

Technologies:

Laravel, PHP, Blade, HTML5, CSS3, JavaScript, MySQL

Report Project – Reporting & Data Management Platform (Laravel, PHP, Blade, HTML, CSS)

Developed a robust reporting and data visualization platform designed for business intelligence and performance tracking:

- Architected a scalable backend using Laravel and PHP, ensuring maintainable and modular code structure.
- Developed comprehensive report generation features, enabling users to create, edit, and visualize custom reports from various data sources.
- Designed responsive and user-friendly interfaces using Blade templates, HTML, and CSS for optimal usability across devices.
- Implemented dynamic data filtering, sorting, and export functionalities (CSV, Excel, PDF) for flexible report handling.
- Built interactive dashboards with charts and visualizations to provide actionable insights and key business metrics.
- Integrated user authentication and authorization, supporting role-based access for administrators and regular users.
- Developed an admin panel for managing users, report templates, and system settings.
- Ensured data validation, secure transactions, and compliance with privacy standards throughout the platform.
- Followed best practices in Laravel for future scalability and feature expansion, including API endpoints for integration with other systems.

Technologies:

Laravel, PHP, Blade, HTML5, CSS3, JavaScript, MySQL, Filament

E-commerce Platform for Turkish Market (Laravel, PHP, Filament, Flutter)

Designed and developed a full-featured multi-vendor e-commerce platform tailored for the Turkish market with the following capabilities:

- Architected a scalable backend using Laravel and implemented a modern, responsive frontend with Blade templating.
- Developed comprehensive product management, including inventory, categories, brands, and product variants.
- Built secure user authentication and authorization, supporting both customers and admin roles.
- Implemented a dynamic shopping cart, order processing, and checkout system with payment gateway integration.
- Enabled vendors to manage their own stores, products, orders, and promotions within a multi-vendor ecosystem.
- Developed an intuitive admin dashboard for managing users, vendors, products, orders, and site-wide settings.
- Integrated order tracking, status notifications, and automated email communications for customers and vendors.
- Supported localization and multi-language features, focusing on Turkish language and market requirements.
- Implemented discount codes, promotional campaigns, and featured product sections to drive sales.

Technologies:

Laravel, PHP 8, Blade, MySQL, RESTful API, HTML5, CSS3, JavaScript, Payment Integration

Real Estate Listing & Management Platform (Laravel, Blade, PHP, HTML, CSS)

Developed a comprehensive real estate platform for property listings and management with the following features:

- Designed a responsive and user-friendly interface using Blade, HTML, and CSS for seamless browsing across devices.
- Implemented robust property listing management, allowing agents and users to add, edit, and search for properties based on various criteria (location, price, type, etc.).
- Built an advanced filtering and search system to help users easily find suitable properties.
- Integrated user authentication and authorization, enabling different access levels for admins, agents, and regular users.
- Developed an intuitive admin dashboard for managing property listings, user accounts, and site-wide settings.
- Enabled image galleries and detailed property descriptions to enhance user engagement and listing quality.
- Implemented contact and inquiry forms, facilitating direct communication between interested buyers/renters and property listers.
- Ensured data validation, secure transactions, and privacy compliance throughout the platform.
- Supported localization and multi-language features as required by the target market.
- Built modular, maintainable code using Laravel best practices for future scalability and feature expansion.

Technologies:

Laravel, PHP, Blade, HTML5, CSS3, JavaScript, MySQL

PlusP MultiBusiness App With Dashboard (Flutter With Laravel)

The project plusp is a robust, multi-business platform designed to manage various retail operations such as pharmacies, supermarkets, and laundromats. Its main purpose is to provide comprehensive business management features tailored to different sectors within one unified system.

Key Features

- Multiple Business Types: Manage different businesses (pharmacies, supermarkets, laundromats) with dedicated pages for products, categories, and brands.
- Dynamic Brand Management: Assign brands to specific business types, each with its own lists for brands, categories, products, and offers.
- Category & Subcategory Management: Create custom categories and subcategories for each business type for better product organization.
- Product Management:
 - Add, edit, and manage products within each business.
 - Support for product variants (different sizes, colors, attributes).
 - Set product prices and manage stock levels for each variant.
- Admin Interface: User-friendly admin panel for managing business data, products, brands, categories, subcategories, and more.
- Product Variant Support: Manage different versions of the same product with customizable attributes.
- Points System: Reward-based points system for customers (e.g., earning points for purchases or reviews, redeemable for discounts or products).
- Wallet System: Virtual wallet for users to add funds, make purchases, and track transactions.
- Discount Offers: Create and manage discount offers for products or categories.
- Payment Integration: Integration with payment gateways to securely handle payments, supporting various payment methods.

website: <https://plusp.msarweb.net>

Pharmacy Management and Education Platform (Laravel, Filament, PHP, REST API , Flutter)

Developed a comprehensive pharmacy management and education system with the following features:

- Designed and implemented a Learning Management System (LMS) supporting video-based courses, quizzes, user progress tracking, and honor roll recognition for achievements.
- Built robust user management with profile approval workflows, registration code verification, and extensive personal/professional attributes.
- Integrated a social platform for user-generated stories, content moderation, likes, complaints, blocking, and favorites.
- Developed a powerful admin panel using Filament, enabling granular control over users, courses, quizzes, stories, system settings, and moderation tasks.
- Architected a RESTful API (Laravel Sanctum) for authentication, user management, learning content, and social features, supporting web and mobile clients.
- Implemented advanced security with token-based authentication, OTP verification for sensitive actions, and secure password hashing.
- Enabled full multilingual support and internationalization across the entire application.
- Designed modular and scalable backend architecture, following Laravel best practices (MVC, service providers, resource controllers).
- Planned for future enhancements such as analytics dashboards, advanced content search, push notifications, enhanced media support, and e-commerce integration.

Technologies:

Laravel, PHP 8, Filament, Blade, CSS, JavaScript, MySQL, RESTful API, Sanctum, OTP, ApexCharts, Excel Export, Firebase Messaging (planned)

Nesf Elsaee App For With Dashbard System (Flutter With Laravel)

The platform aims to securely connect individuals seeking real estate (for purchase, rental, etc.) with property owners or agents through real estate offices and companies. It ensures streamlined and secure property transactions while offering a user-friendly experience.

Key Features:

- **User Management:** Multi-role system (users, service providers, real estate offices, admins) with secure login and recovery.
- **Property Listings:** Verified ads with images, maps, and advanced search/filter options.
- **Transactions:** Down payment reservations, secure communication, and transparent records.
- **Subscriptions:** Flexible ad packages with upgrades and balance transfers.
- **Interactive Tools:** Notifications, ratings, social sharing, and mortgage calculator.
- **Admin Dashboard:** Manage users, ads, and transactions with analytics.
